

1 1. A septic system treatment process comprising the steps of:
2 providing a septic tank for collection of effluent,
3 aerating effluent in a septic tank in the septic system,
4 providing a drain field adjacent the septic tank for receiving effluent therefrom,
5 and
6 aerating the drain field.

1 2. A septic system treatment process as in claim 1 with the further step of,
2 adding a combination of organisms, enzymes, and nutrients to the septic system to
3 increase the organism populations and their effectiveness in waste clean up.

1 3. A septic system treatment process for an existing septic system having a septic
2 tank with an aerator in the septic tank and a drain field comprising:
3 adding a means for aerating the drain field.

1 4. A septic system treatment process as in claim 3 with the further step of,
2 adding a combination of organisms, enzymes, and nutrients to the septic system to
3 increase the organism populations and their effectiveness in waste clean up.
